Take-home task

Due 9 Nov 2026, 11:59 pm IST

Read the brief 2 Choose a problem 3 Submit

Brief

Your task

You are the Isocode Labs product manager on a live deal. A client has sent us the brief you pick below. Take the deal from "interested" to "ready to sign".

You submit	One ZIP file with three documents: the PRD, the project timeline and a draft agreement
Time	7 days from when this step opens
Work	Alone

Isocode Labs builds custom websites, web apps and AI automations. A typical project costs ₹5–10 lakh and takes 4–8 weeks.

Use AI, and use it well

AI tools are **highly recommended**. Use them to draft faster, test ideas, find gaps and polish your work, so that what you hand in is a more finished, specific outcome for this client and not a generic one. The judgement, the numbers and the final choices must still be yours. You will explain them in the interview.

What to do

Pick **one** problem statement from the ones shown to you. Then write:

1. The PRD for the whole project

- The problem, the goals and what you are **not** doing
- Users and their journeys
- Prioritised requirements: what is in the first release, what comes later, and why
- How any AI or automation behaves, and what happens when it is wrong
- Design approach and the key screens
- Data, integrations and rules the product must follow
- Risks, success measures and the open questions you would put to the client

2. The project timeline

- Phases, milestones and deliverables, week by week
- Who does what: the Isocode team and the client
- Dependencies, buffers and the points where the client approves work
- It must fit the budget and time the client gave you

3. The agreement, ready to send before the deal closes

- Scope, exclusions and deliverables
- Timeline, price in ₹ and payment milestones
- Change requests, client responsibilities and acceptance
- Ownership of the work, confidentiality and data protection, support after launch, ending the agreement
- A signature block. Mark it as a draft for legal review

How to submit

Put the three files in **one .zip** (up to 25 MB) and upload it. Name the files clearly, for example `PRD.pdf`, `Timeline.xlsx` and `Agreement.pdf`.

Rules

- Label every assumption. Do not invent facts about the client without saying so
- Use only the information in the problem statement. The "CORE BUILD" paragraph is for engineers: you plan the whole project
- Check that your numbers add up. You will explain them in the interview
- Do not say you represent Isocode Labs to anyone outside this task
- You can resubmit until the deadline; we review your latest version

What great looks like

- A clear scope: someone could build from it without asking you anything
- A timeline and price that hold together
- An agreement a client could sign, with no gaps

- Honest trade-offs: what you cut and why
- Extra depth, well-judged ideas beyond the core and careful edge cases count in your favour

Common mistakes

- Copying the brief back as the PRD
- A timeline with no client responsibilities or approval points
- An agreement with no exclusions or change process
- Features with no priority, and no answer for when the AI is wrong
- Generic text that could be for any client

How you'll be scored

Area	Weight
Quality of work	50%
Problem solving	30%
Communication	20%

Choose your problem statement (Required)

These briefs were picked for you. Open each one to read it, then choose one and base all your work on it. The submission form appears once you choose.

5 client briefs, one chosen by you

1 Tour operator's website with custom CMS for packages, blogs and enquiries

2 Auto-component maker's RFQ-to-quote costing web app

3 Mid-size hospital's cashless claims and TPA tracking workspace

4 Farmer producer company's offline procurement and payment app

5 Restaurant chain's direct ordering website with kitchen display
